

## **Cloud gives birth to new animal: Mysteme of the Neuropatheme.**

Natural History: Cloud gives birth to new animal. Who that? Neuropatheme! Once human organs become elements of feedback loops, they no longer register sensation but affect as information. No tasty-tasty, no-look-and-see, no-touchy-touchy, no-fukko-fukkee: only interference patterns, zero-one, zero-one, zero-on, zero-on, zero-one... Cloud gives birth to new animal. Who that? The body as a feedback. The body as a feedback loop produces its own affects - entropy, overload, vertigo, anxiety, catatonia, joy - and in turn feelings are produced. Oh, yes. Feelings. First neuropathemes mistake feedback for thoughts rather than playback. 'Whoaaaa Sir!' They say, 'I feel this, I feel that...' For the first neuropathemes are still gripped by the language parasite either/or that enters the anus of the human at 18 months and travels up the digestive tracts to the mouth, nasal passages and then pierces the brain's membrane. Cloud gives birth to new animal. What that then? When the world becomes opaque, ambient feedback environments are created, a smart cloud is born, and neuropatheme is always, already, ready, always on. Whoaaa Siree!

But cloud is a fever. Fire-fire. It come. Fire gonna come, fire gonna burn, scorch blood-sucker parasite, burn I-he-she. Cut-ye cut-ye cut-ye. Nueropatheme runs the infinite space of the cloud but language parasite does slow neuropatheme down. Time not enough to run the cloud. Fire-fire and... burn out.

Neuropatheme mutates: second generation neuropatheme is born. Neither I, neither you, neither he, neither she, neither they, no either-either, only neither-neither. Second generation neuropatheme say 'I feel this, I feel that... then I feel dis and dat, then I feel dash and dot, then dash and dot, then dash-dot, dash-dot, dash-dot...
